INDEX.

Abbeville jaw, the, 457.
Acanthopterygii or perches, 253.
Acephalous animals, 67.
Achlya prolifera on dead salamander, 148.
Achlya spores, 148.
Acineta, a supposed new, 340.
Aerial Navigation Society, 146.
Aerolites with low velocities, 123.
Agaricus, genera resembling, 2.
Agriculture, phosphates used in, 273.
Agriculture, principles of, 379.
Air of Manchester, carbonic acid in the, 141.
Air, ozone produced by agitation of the, 305.
Albumenized paper and glass, 234.
Albumen process, toning bath for, 385.
Alderia modesta found on salt marshes, 34.
Alvan Clark on the sun and stars, 465.
Amphipodous crustaceans, 30.
Amplification, best mode of obtaining, 329.
Anabas, the climbing, 145.
Anacalypta mosses, 8.
Anacharis, the, in flower, 466.
Anæsthetics, new, 305.
Anchoring mollusks, 215.
Ancient habitations in Anglesea, 224.
Andes, new pass over the, 383.
Angle of aperture, advantages of, 329.
Anglesea, ancient habitations in, 224,
Aniline yellow, and aniline blue, 145.
Animal creation, power of God in, 456.
Animalcules, escape of, from freezing to death, 53.
Animalcules, natural history of hairy backed, 387.
Animals, grafting, 385.
Annelids, enmity between Corophium and, 29.
Anthropological Society. — The theory of natural selection as applied to the human races, 223.
Antozone, ozone and, 306.
Ants, white, in St. Helena, 62.
Aphanomyces spores, 149.
Apple mosses, 258.
Archæological Institute.—Ancient habitations in Anglesea, 224.
Archives of medicine, 375.
Are different bodies luminous at the same temperature? 65.
Arenariæ found in salt marshes, 27.
Armadillidium, habits of, 31.
Armstrong guns, 119.
Art, the functions of, 356.
Artificial islands in Irish lakes, 171.
Artificial rainbow, 146.
Artillery experiments, 113.
Ascent of Mr. Glashier, 66.
Ascobolus, beautiful species of, 1.
Asplanchna, voracity of the, 182.
Aster tripolium, 27.
Astronomical soirée, 464.
Astronomy.—We never see the stars, 47; clusters and nebulæ, 54; double star, 58; the great nebula in Orion, 58; comparison of sun and stars, 60; occultation, 62; the midnight sun, 95; aerolites with low velocities, 123; constancy of solar light and heat, 129; clusters and nebulæ, 138; double stars, 138; occultations, 140; shooting stars in the two hemispheres, 145; the moon, 193; planets of the month, 206; double star, 206; occultations, 206; star-following with table stands, 290; solar observation, 292; transits of Jupiter's satellites, 299; the earth as seen from the moon, 324; star-following, 338; Gautier on the physical constitution of the sun, 345; neighbourhood of the lunar spot, Mare crisium, 359; transits of Jupiter's satellites, 368; occultations, 368; solar observation, 434; colours of stars, 436; constitution of nebulæ, 443; transits of Jupiter's satellites, 443; Romsey Observatory, 445.
Astronomy, outlines of, 455.
Atmosphere, our, and the ether of space, 211.
Atriplex, species of, on salt marshes, 27.
Aurotype, the, 237.
Australia, ethnology of, 141.

Automatic weighing at the Royal Mint, 72.
Azimuth of the sun, explanation of an, 168.

Barograph at Kew, 323.
Barometers, testing, 320.
Bartramia pomiformis and other species of apple moss, 263.
Batrachospermum, specimen of, 13.
Beale on blood corpuscles, 65.
Belgian aerolites, 123.
Birds gregarious in winter, 20.
Birds in suburbs of London, 17.
Blood corpuscles, Beale on, 65.
Blood corpuscles, shape of, 273.
Blood corpuscles, white, 64.
Blood, entozoa in human, 142.
Blood, germinal matter in the, 272.
Blue, aniline, 145.
Boletus, genera resembling, 2.
Bolide of May 14th, 466.
Bones found in Swiss lakes, 175.
Bones imported for manure, 275.
Botany.—A new British fungus, 1; the mosses Anacalypta and Pottia, 8; mosses Grimmia and Schistidium, 106; the extinguisher mosses, 207; cycads, 246; mosses to be found in May, cord mosses, apple mosses, 258; lessons on elementary botany, 378; the side-fruiting mosses, 410.
Bowenia spectabilis, 249.
Bows and arrows inconvenient in war, 114.
Brain, how it does its work, 136.
Bright's disease, use of electricity in, 465.
British fungus, a new, 1.
British mollusca, dentition of, 67.
Bronze age, antiquity of the, 177.
Bronze coins, weights and dimensions of, 78.
Bruniquel, human fossils found at, 65.
Bruniquel, human remains in the cavern of, 463
Bufo calamita (natterjack) in Ireland, 227.
Byssus of mussel, importance of, 216.

Caddis worm, the, and its houses, 307.
Caddis flies, eggs of, 16.
Cage birds, curious, 19.
Calcium, preparation of, 221.
Calænas Nicobarica (Nicobar pigeon), 349.
Calotype, 234.
Canada balsam, for mounting, 330.
Cape de la Heve, electrical light at, 146.
Carbon modifies the character of iron, 421.
Carbon process in photography, 237.
Carbonic acid in the air of Manchester, 141.
Carinaria shells, high price of, 215.
Case hardening by arsenic, 424.
Cases of the Caddis worm, 307.
Cast iron, 422; mending broken, 423.
Catylissotype, the, 238.
Catoscopium nigritum (moss), 267.
Cercaria podura, 388.
Cercopithecus fuliginosus, entozoa in blood of, 143.
Cerebellum, functions of the, 384.
Chætonotus, description of the genus, 390.
Chætonotidæ, natural history of, 387.
Cheap observatory, 241.
China rose near London, 19.
Chironomus plumosus, 15.
Chiton discrepans, dentition of, 70.
Chrysotype, 237.
Ciliary stomach currents of Asplanchna, 184.
Cinclus aquaticus (water blackbird), 19.
Circulation, viewing a tadpole, 386.
Clavaria vermicularis (fungus), 2.
Climbing anabas, 145.
Climacium dendroides (moss), 418.
Climate of the moon, 459.
Clupea harengus (herring), 368.
Codfish and other enemies of herrings, 370.
Colours of stars, 436.
Collodion process, moist, 235; dry, 236.
Collins' binocular microscope, 225.
Comets IV. and V., 1863, common origin of, 304.
Comets whose orbits have not been calculated, 218, 373.
Comets' tails, deviation of, 465.
Condensation of vapours, 432.
Confervæ in ice, 51.
Confervæ, molecular motion in, 271.
Conus gloria-maris shells, high price of, 216.
Coins, weights and dimensions of British, 78
Copan, ruins of, 38.
Copper coinage, old, 78.
Coprolites, a source of phosphate of lime, 276.
Corals, fossil, of the West Indies, 380.
Cord mosses, 258.
Corophium longicorne in salt marshes, 29.
Cothurnian, 340.
Crangon vulgaris (common shrimp), 32.
Cray-fish, artificial breeding of, 355.
Crime, insanity and, 131.
Crithmum maritimum (samphire), 26.
Crocodile, great, of the Oolite, 385.

Crossbill, 24.
Crustacea, hearing of, 305.
Cryptogamia, 1.
Cuba, fecundity in, 306.
Cycads, 246.
Cycas revoluta, cultivated at Dresden, 251.
Cylindrothecium Montagnei (moss), 418.
Cyprideis torosa on salt marshes, 31.
Cypræa Europæa, teeth of, 67.
Cystopus, active spores of, 148.
Cythere, beauties of, 32.

DAGUERREOTYPE, 157.
Daguerreotype process, 233.
Dasydytes, description of the genus, 399.
Daylight, continuous, 101.
Days, unequal, in different latitudes, 98.
De la Rue's astronomical soirée, 464.
Dentition of British mollusca, 67.
Desmids, swarming process of, 271.
Dichelyma capillaceum and other species described, 411.
Didunculus, or little Dodo, 346.
Difflugian rhizopods, variations in, 304.
Dion edule, starch from, 252.
Discelium nudum (naked apple moss), 268.
Disease, deficiency of vital power in, 375.
Distoma hæmatobium, ova of, 143
Dodo, the little, 346.
Dreissena polymorpha (mussel), 315.

EAGLE, keen sight of the, 49.
Earth, our, difference between its phases and those of the moon, 326.
Earth, size and figure of the, 384.
Earth, the, as seen from the moon, 324.
Earthquake at Mendoza, 20th March, 1861, 85.
Earthquake in Sussex, 385.
Echinodera, description of the genus, 403.
Education of spiders, 146.
Egg parasites and their relatives, 147.
Electrical light at Cape de la Heve, 146.
Electricity in Bright's disease, use of, 465.
Encalypta vulgaris (moss), 207; species of described, 208.
Encaustic photography, 241.
Encephalartos Caffer, 247.
Encephalous animals, 67.
Enfield rifles, 116.
Engraving, Vial's process of, 226.
ENTOMOLOGICAL SOCIETY.—Introduction of white ants into St. Helena, 62; probable new source of silk, 143; artificial modification of wasps' nests and intelligence in the honey bee, 462.
Entomostraca of salt marshes, 31.
Entozoa in the human blood, 142.
Equatoreals, portable, 166.
Escape from the earthquake of Mendoza, 89.
Essential oils, preparation of, 63.
Ether of space and our atmosphere, 211,
ETHNOLOGICAL SOCIETY.—The varieties of man in the Indian Archipelago, 141; on the ethnology of Australia, 141.
Ethnology of Australia, 141.
Euglena pyrum in the stomach of Asplanchna, 183.
Exogenous seeds and fern spores, 333.
Explosion at Liverpool, 66.
Eye-piece, Dawes's solar, 434.

FACTS about iron, 419.
Fairbairn on iron girders, 304.
Febrile cephalalgia, cure of, 466
February, mosses found during, 8.
Fecundity in Cuba, 306.
Fermentation, new facts in, 145.
Fern spores, 333.
Ferns, characteristic feature of, 247.
Fieldfares, 23.
Fire-arms and the laws of motion, 113.
Fish eggs, œdogonium infesting, 147.
Fish eggs, parasites infesting, 147.
Fish in upper limestone, 380.
Fishes, discovery of poison organs in, 253.
Fishes of the British islands, Couch's history of, 5.
Flint implements at Stroud, 381.
Flint implements found in Switzerland, 170.
Flint implements from Syria, 306.
Flint implements in drift deposits in Hants and Wilts, 222.
Fontinalis antipyretica and other species, 271, 411.
Fossil corals of the West Indian islands, 380.
Fossils from the Lingula flags, 299.
Fossils, human, 65.
Four-horned trunk fish, a native of England, 407.
Freestone's mounting table, 332.
Frog, construction of nerve cells of, 375.
Frost in the summer of 1864, 425.
Fry of herring, habits of the, 369.

Full moon always opposite the sun, 101.
Funaria hygrometrica and other species of cord moss, 258.
Fungi, active spores amongst, 148.
Fungi, to dress for table, 3.
Fungus, a new British, 1.

Gammaracanthus loricatus identical with marine crustacea, 33.
Gammarus cancelloides identical with marine crustacea, 33.
Gammarus found on salt marshes, 30.
Gases, action of porcelain and lavas on, 226.
Gasteropods, 67.
Gasterosteus aculeatus (stickleback), 4.
Gautier on the physical constitution of the sun, 345.
General Jacob's rifles, 117.
Generation, spontaneous, committee, 145.
Geological Society.—The Permian rocks of the North-west of England, 144; succession of British Mesozoic strata, 222; recent discoveries of flint implements in drift deposits in Hants and Wilts, 222; on the discovery of the scales of pteraspis, 222; new fossils from the Lingula flags, 299; the silicious springs in the Nevada territory, 299; the red rock at Hunstanton, 300; discovery of fish in upper limestone of Permian formation, 380; the fossil corals of West Indian islands, 380; mammalian remains near Thame, 381; deposit at Stroud containing flint implements, etc., 381; on the geological structure of the Malvern Hills, 462.
Geological structure of the Malvern Hills, 462.
Germinal matter in the blood, 272.
Germs of infusoria, 225.
Ghosts everywhere and of any colour, 37.
Ghosts optical, 34.
Glashier's 12th January ascent, 66.
Glashier's 18th ascent, 386.
Glass, albumenized, 235.
Glaux maritima in salt marshes, 26.
Gold coins, weights and dimensions of, 78.
Gold-crowned wren in winter, 21.
Gold weighing at the Mint, 72.
Grafting animals, 385.
Greenfinches in Stepney, 24.
Green ice, 51.
Green sand, a source of phosphate of lime, 277.
Grimmia, species of, 106.
Grosbeak, 24.
Guano, 275.
Gun cotton, discoveries respecting its properties, 302.
Gun cotton, mechanical effects of, 457.
Gunpowder unsurpassed for firearms, 122.
Guns and projectiles, 113.
Guns, story of the, 114.

Hail, conical, 385.
Hants, flint implements in, 222.
Harvest finches, 18.
Hawks, keen sight of, 49.
Hearing of crustacea, 305.
Heat considered as a mode of motion, 52.
Heat, constancy of solar, 129; of meteors, 130.
Heat of aerolites, 124.
Heat, tables of, in May and June, 426.
Heavenly bodies, remoteness of, 242.
Heliography, 238.
Heliochromy, 240.
Heliography, term suggested for photography, 150.
Helix pomatia, teeth of, 71.
Herring, on the, 368.
Herrings, curious reasons for their disappearance, 372.
Herrings, their numerous enemies, 370.
Herodotus, statements of, confirmed, 174.
Homes without hands, 352.
Honey bee, intelligence in the, 462.
Hooping cough, cure for, 386.
Human blood, entozoa in, 142.
Human fossils from Bruniquel, 65, 463.
Human races, natural selection and the, 223.
Hunstanton, red rock at, 300.
Hydnum imbricatum and other species, 1.
Hypnum delicatulum and other species described, 414.

Ice, formation of thick, 386.
Ice, green, 51.
Ichthydium, description of the genus, 392.
Images, enlarging in photography, 238.
Implements and ornaments found in Switzerland, 170.
Inertia, the term, gives a false idea, 187.
Indian Archipelago, varieties of man in the, 141.
Indium, properties of the metal, 381.
Industrial education of spiders, 146.
Infusoria, germs of, 225.
Infusoria, molecular motion in, 272.
Injection of oxygen into veins, 146.
Insanity and crime, 131.
Insects, larval reproduction in, 306.

Intelligence in the honey bee, 462.
Iodide of potassium a test for ozone, 160.
Iron, facts about, 419.
Iron girders, Fairburn on, 304.
Ironwork at Nineveh, 420.
Isothecium alopecurum (moss), 418.

KEW Observatory, 318.

LACUSTRINE dwellings, 175.
Lake dwellings in Asia, 179.
Lake habitations of Switzerland, ancient, 170.
Larval reproduction in insects, 306.
Lavas, action of, on gases, 216.
Lead rings for microscope slides, 66.
Light, constancy of solar, 129; of meteors, 130.
Light of stars compared, 385.
Light of the sun and stars, origin of the, 448.
Limapontia slug found on salt marshes, 34.
Limax marginatus, teeth of, 71.
Limestone, discovery of fish in, 380.
Linaria pusilla (redpole), 24.
Lingula flags, new fossils from the, 299.
LINNEAN SOCIETY.—On the phenomena of variation as illustrated by the Malayan Papilionidæ, 300.
Living bodies, molecular motions in, 269.
Liverpool, explosion at, 66.
Lobsters, artificial breeding of, 355.
LONDON INSTITUTION.—Sources of the Nile, 63.
LONDON MICROSCOPICAL SOCIETY.—On white blood corpuscles, 64.
London, birds in the suburbs of, 17.
Longevity, effects of open-air exercise on, 221.
Loxia chloris (greenfinch), 24.
Luminosity of different bodies, 65.
Lunar craters, recently named, 64.
Lunatic asylums, remedial treatment in, 133.
Lunar influence on the weather, 378.

MACROZAMIA spiralis, nuts of, 251.
Magnetographs at Kew, 322.
Magnetic experiments, new, 460.
Magnetic needle, observations made at Kew, 323.
Magnus on the condensation of vapours, 432.
Malvern Hills, geological structure of the, 462.
Mammalian remains near Thame, 381.
MANCHESTER PHILOSOPHICAL SOCIETY.—On the amount of carbonic acid existing in the air of Manchester, 141; preparation of calcium, 221.
Manchester, carbonic acid in the air of, 141.
Manuring, when first understood, 273.
Meat, preservation of, 146, 301.
Mechanical effects of gun cotton, 457.
Medicine, archives of, 375.
Metals at high temperature, permeability of, 226.
Memory, loss of, 66.
Mendoza, earthquake at, 85.
Meteorological observations made at Kew Observatory, 40, 284.
Meteors, light and heat of, 130.
Mesozoic strata, succession of British, 222.
MICROSCOPY.—Lead rings for slides, 66; microscopical soirée at Apothecaries' Hall, 463.
Microscopic soirée at Apothecaries' Hall, 463.
Microscope, Collins' binocular, 225.
Microscope, a windfall for the, 13.
Microscopic literature, recent, 328.
Microcoleus anguiformis in salt marshes, 29.
Midnight sun, 95.
Milan, strange weather fact at, 66.
Millepora reticulata (fungus), 2.
Minie rifles, 116.
Minstrels of the winter, 17.
Mistletoe near London, 19.
Missel thrush, 19.
Molecular motions in living bodies, 269.
Mollusca, dentition of British, 67.
Mollusca, cultivation of, 354.
Mollusca, obtaining palates of, 305.
Mollusks, anchoring, 215.
Moon, temperature and climate of the, 459; earth as seen from, 324.
Moon, 193; index map of the, 190.
Moon, possible action of the, 226.
Motacilla troglodytes (wren), 22.
Moth of the ordeal bean, 385.
Motion, laws of, exhibited by fire-arms, 113.
Motion, heat considered as a mode of, 52.
Moss, favourite habitats of, 268.
Mosses found in May, 258.
Mosses, the extinguisher, 207.
Mosses—Anacalypta and Pottia, 8.
Mosses—Grimmia and Schistidium, 106.
Mosses, the side fruiting, 410.
Mount Chamblon, ancient dwellings of, 178.
Mountain finch, 24.
Mounting in Canada balsam, 331.
Mountain linnet in winter, 24.
Mounting, new table for, 64.

Musket, advantages of, over the bow, 114
Mussel, how does it spin its byssus, 217.
Mytilus edulis (mussel), 218.
Mysis vulgaris in brackish water, 32.
Myxogastres, active spores of, 148.

Natica, teeth of, 67.
Natterjack toad in Ireland, 227.
Natural selection applied to the human races, 223.
Natural history, recreations in, 351.
Negative evidence, illustration of, 145.
Nerve cells of the frog, 375.
Nest of sticklebacks, 4.
Neuroptera, 307.
Nevada territory, silicious springs in, 299.
Nights, unequal, in different latitudes, 98.
Nile, sources of the, 63.
Nile, lecture on the sources of the, 378.
Nile, the, in early ages, 146.
Nitrogen, chief sources of, 274.
North Cape on a June midnight, 105.
Nostoc, 13.
Notes and memoranda, 64, 145, 225, 304, 383, 465.

Oak, silk-forming larva feeding on, 143.
Oak, silkworms of the, 384.
Observatory, the Romsey, 445.
Observatory, a cheap, 241.
Œdogonium infesting eggs of fish, 147.
Oogonium, origin of the term, 149.
Oolite, great crocodile of the, 385.
Oils, preparation of essential, 63.
Open-air exercise and longevity, 221.
Optical ghosts, 34.
Optical properties of organic bodies, 223.
Ordeal bean, moth of the, 385.
Ordnance, rifled, 120.
Organic bodies and their optical properties, 223.
Ornaments, ancient, found in Switzerland, 170.
Orthotrichum diaphanum, 261.
Oscillatoria in ice, 51.
Oscillatoria found on salt marshes, 28.
Oscillation, phenomenon of, 28.
Ostracion quadricornis (four-horned trunk fish), 408.
Oxygen, views of Clausius on, 306.
Oxygen in veins, injection of, 146.
Oysters, cultivation of, 354.
Ozone and antozone, 306.
Ozone and ozone tests, 160.
Ozone, production of, 305.

Palates of mollusca, obtaining, 305.
Palæmon varians in brackish water, 32.
Pæonians, an ancient race called, 174.
Paper, albumenized, 234; waxed, 235.
Papilionidæ, phenomena of variation in, 300.
Parasites, egg, and their relatives, 147.
Pass, new, over the Andes, 383.
Patella athletica, teeth of, 70.
Pedicle of lamp shell, importance of cables of, 216.
Pen y llwyn, Welsh name for missel thrush, 20.
Perches, poison organs in, 253.
Peronospora, active spores of, 148.
Permian rocks of the north-west of England, 144.
Permeability of metals, 226.
Pernis on the coast of Saintonge, 30.
Peziza, genera resembling, 2.
Pharmaceutical Society.—Preparation of essential oils, 63.
Photography.—Its history, position, and prospects—Part I. History of photography, 153.
Photographic processes, 233.
Photographic engraving, 239.
Photographs, coloration of, 239.
Photolithography, 239.
Photoheliograph at Kew, 323.
Photography with textile fabrics, 237.
Phosphates used in agriculture, 273.
Phryganeidæ (Caddis flies), 16.
Physical science, foundations of, 185.
Pig iron, 422.
Pile works of the Swiss lakes, 171.
Pisciculture, study of, 7.
Planet, the 80th, 306.
Planorbis albus, teeth of, 71.
Plantago, species of, on salt marshes, 27.
Platinotype, the, 237.
Platycerium alcicorne (fern), 335.
Podophrya ovata and pyriformis, 344.
Poison, insensibility to, 385.
Poison organs in fishes, discovery of, 253.
Pollen, conservation of, 465.
Polytrichum hercynicum, 11.
Pontoporeia affinis identical with marine crustacea, 33.
Porcelain and lavas, action of, on gases, 226.
Porcellio, habits of, 31.
Portable equatoreals, 166.
Potamageton eaten by cows, 19.
Potash, new source of, 225.
Pottia mosses and species described, 11.
Power of God in the animal creation, 456.
Proceedings of Learned Societies, 62, 141, 221, 299, 380, 457.

Procyon, companion of, 304.
Projectiles, guns and, 113.
Pteraspis, discovery of the scales of, 222.
Pulse, action of tobacco on the, 466.
Pythium spores, 149.

Rainbow, artificial, 146.
Recreations in natural history, 351.
Redpoles in Stepney, 24.
Red rock at Hunstanton, 300.
Registration of the movements of wind, 126.
Regulus aurocapillus (gold crowned wren), 22.
Reindeer period, sculpture of the, 304.
Responsibility defined by English law, 133.
Rhizina undulata (fungus), 1.
Rhizopods, variations in, 304.
Rice grains on the sun, 305.
Rifles, 115.
Robin singing in winter, 21.
Romsey Observatory, the, 445.
Rose book, 456.
Round projectiles not the best, 115.
Royal Geographical Society.—A new discovered low pass over the Andes in Chili, 383.
Royal Society.—Human remains in the Cavern of Bruniquel, 463.
Royal Institution.—The discrimination of organic bodies by their optical properties, 223; recent discoveries respecting the properties of gun-cotton, 302; properties of the new metal Indium, 381; on the mechanical effects of gun-cotton 457; temperature and climate of the moon, 459; new magnetic experiments, 460.
Royal Medical and Chirurgical Society.—Entozoa in the human blood, 142.
Ruins at Mendoza, 85.
Ruins of Copan, 38.

Salt marshes and their inhabitants, 26.
Salvin's photographs of Copan, 39.
Salicornia herbacea in salt marshes, 26.
Saprolegnia, spores of, 148.
Saxby's weather system, 378.
Saprolegnia ferax, various forms of, 147.
Schistidium (moss) species of, 112.
Science, foundations of physical, 185.
Sciences, classification of the, 379.
Sculpture of the reindeer period in France, 304.
Sea lavender, habitat of the, 27.
Sea catchfly on salt marshes, 27.
Seed, description of a perfect, 333.
Seeds, exogenous, 333.
Shells found at Stroud, 381.
Shell mounds on the Danish coast, 171.
Shots, penetrating power of, 120.
Shot stars, 13.
Shooting stars at Rome, 211.
Shooting stars in the two hemispheres, 145.
Shrimp, opposum, 33.
Shrimps in brackish water, 32.
Silene maritima (sea catchfly), 27.
Silktail, 24.
Silk, probable new source of, 143.
Silk-producing insects, 352.
Silkworms, diseases of, 352.
Silkworms of the oak, 384.
Silicious springs in the Nevada territory, 299.
Silver, action of light on the salt of, 151.
Silver, automatic weighing of, 72.
Silver coins, weights and dimensions of, 78.
Sirius, companions of, 384.
Sirius, Struve on the companion of, 465.
Snow fall and wind storms, 65.
Snow in May, 1864, 425.
Snow crystals, 279.
Snowflake, 24.
Society of Arts.—New method of preserving meat, 301.
Society of Arts.—New method of preserving meat, 301.
Soils, ingredients of, 274.
Solar spots, 345.
Solar light and heat, constancy of, 129.
Solar observation, 292.
Sources of the Nile, 63; 378.
Sparassis crispa (beautiful fungus), 1.
Spectrum analysis with reference to the stars, 50.
Sphæroma, species of, 31.
Spiders, industrial education of, 146.
Spiders making carpets, 353.
Spirulina, oscillation of, 29.
Spontaneous Generation Committee, 145.
Sponge spicules, 66.
Spores, active, 148.
Spots on the sun, 450.
St. Helena, white ants in, 62.
Starch a test for ozone, 160.
Stangeria paradoxa, seeds of, 248.
Stark's Anacalypta moss, 8.
Stars, shooting, in the two hemispheres, 145.
Star following with table stands, 290.
Star-following, 338.
Stars, Alvan Clark on the, 465.
Stars, colours of, 436.
Stars, comparing the light of, 385.
Stars, origin of the light of the, 448.
Stars, we never see the, 47.

Statice limonium (sea lavender), 27.
Statistical Society. — Effects of open-air exercise on longevity, 221.
Steel, 421.
Stereum, a genus of fungi, 2.
Sticklebacks, curious habits of, 4.
Stomach currents of the asplanchna, 182.
Stone age, antiquity of the, 177.
Storm-cock, habits of the, 20.
Storms and snow fall, 65.
Struve on the companion of Sirius, 465.
Sulphate of ammonia for manure, 274.
Sun, Alvan Clark on the, 465.
Sun, origin of the light of the, 448.
Sun, spots on the, 450.
Sun, surface of the, 383.
Sun, the midnight, 95.
Sun, willow leaves on the, 305.
Sun, physical constitution of the, 345.
Surgical accident, a strange, 306.
Surface of the sun, 383.
Swiss rifles, 116.
Switzerland, ancient lake habitations of, 170.
Syria, flint implements from, 306.

Table for heating slides, new, 64.
Tablestands, star-following with, 290
Tadpole circulation, viewing, 386.
Taphrocampa, description of the genus, 404.
Teeth of gasteropods, 67.
Telescope stands, importance of good, 339.
Temperature and climate of the moon, 459.
Temple Anecdotes, 456.
Terebratulidæ (lamp shells), 216.
Thalassophryne reticulata, poison organs of, 256.
Thelephora, a genus of fungi, 2.
Thermometer, to construct a, 321.
Thrift, where it best flourishes, 27.
Tinea punctata a silk-spinner, 353.
Toad, natterjack, in Ireland, 227.
Tobacco, its action on the pulse, 466.
Toning-bath for albumen process, 385.
Trachinus vipera (sting-fish), 253.
Trawl fishing, destruction caused by, 371.
Tremella nostoc, 13.
Trochus, dentition of, 69.
Trunk-fish, the four-horned, 407.
Turbanella, description of the genus, 402.
Turbellaria, generic distinctions of, 388.
Turdus pilaris (fieldfare thrush), 23.
Turdus viscivorous (missel thrush), 20.

Universal science, essays on, 378.
Utilization of Minute Life, 325.

Vapours, condensation of, 432.
Variation, phenomena of, 300.
Variations in difflugian rhizopods, 304.
Varieties of man in the Indian Archipelago, 141.
Varnish for microscopic objects, 332.
Vaucheria found on salt marshes, 27.
Veins, injection of oxygen into, 146.
Venus as a crescent, seeing, 305.
Vial's process of engraving, 226.
Vision, differences of, 48.
Vital power, on deficiency of, in disease, 375.
Voracity of the asplanchna, 182.
Vortex worms, description of, 388.

Wasps, habits of, 465.
Wasps' nests, artificial modification of, 462.
Wasps' nests, curious collection of, 143.
Water blackbird, 19.
Water, molecular motion in, 271.
Water-ousel a favourite cage-bird, 19.
Waxed paper, to prepare, 235.
Weather fact at Milan, strange, 66.
Weather, lunar influence on the, 378.
Weather, remarkable, of 1864, 425.
Weather system, Saxby's, 378.
Weevers, peculiarity in dorsal fin of, 254.
Weighing machines used at the Mint, 72.
White ants in St. Helena, introduction of, 62.
Whitworth rifles, 116.
Willow leaves on the sun, 305.
Wilts, flint implements, 222.
Wind and its direction, 125.
Wind storms, 65.
Wind, hourly movement of the, 41, 285.
Windfall for the microscope, 13.
Winter, minstrels of the, 17.
Witch-butter, 13.
Woodlark singing in winter, 21.
Works of art in Danish peat-mosses, 171.
Wren singing in winter, 21.

Yellow aniline, 145.

Zamia tenuis, starch from, 252.
Zinco-photography, 239.
Zoology.—Observations on the three spined stickleback, 4; on the herring, 368; history of the hairy-backed animalcules, 387.
Zonites cellarius, teeth of, 71.
